Liao Y., Karnik S., Husain A.;
Submitted (OCT-1995) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: MAJOR SECRETED PROTEASE OF MAST CELLS WITH SUSPECTED ROLES IN VASOACTIVE PEPTIDE GENERATION. EXTRACELLULAR MATRIX DEGRADATION, AND REGULATION OF GLAND SECRETION.
-!- CATALVITY: SPECIFICITY SIMILAR TO CHYMOTRYPSIN.
-!- SUBCELLULAR LOCATION: MAST CELL GRANULES.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1; ALSO KNOWN AS THE TRYPSIN FAMILY. GRANZYME SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SIMILARITY).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1. Chem. 380:1103-1108(1999).
EUNCTION: ENDOPEPTIDASE THAT DEGRADES VARIOUS COMPONENTS OF THE EVINCTION: ENDOPEPTIDASE THAT DEGRADES VARIOUS COMPONENTS OF THE EXTRACELLULAR MATRIX, SUCH AS FIBRIN. MAY BE INVOLVED IN THE ACTIVATION OF MEMBRANE-BOUND PRECURSORS OF GROWTH FACTORS OR INFLAMMATORY MEDIATORS, SUCH AS TUMOR NECROSIS FACTOR-ALPHA. MAY ALSO BE INVOLVED IN TUMORAL PROCESS. NOT OBVIOUS IF ABLE TO PROTEOLYTICALLY ACTIVATES PROGELATINASE A. DOES NOT HYDROLYSE COLLAGEN TYPES T, II, IV AND V, GELATIN, FIBRONECTIN, LAMININ, DECORIN NOR ALPHAI-ANTITRYPSIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             COFACTOR: REQUIRES CALCIUM AND ZINC FOR ACTIVITY (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor.
ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND A
SHORT/PUENTE-TYPE FORM; ARE PRODUCED BY ALTERNATIVE SPLICING.
TISSUE SPECIFICITY: EXPRESSED IN BRAIN, LEUKOCYTES, COLON, OVARY
TESTIS AND BREAST CANCER. EXPRESSED ALSO IN MANY TRANSFORMED AND
NON-TRANSFORMED CELL, TYPES.
                                                                                                                                                                                                                                                                                                                                                     MEDLINE-96234364; PubMed-8640782;

ENDOCTION: IGS-BINDING PROTEINS PROLONG THE HALF-LIFE OF THE IGFS AND HAVE BEEN SHOWN TO EITHER INHIBIT OR STIMULATE THE GROWTH PROMOTING EFFECTS OF THE IGFS ON CELL CULTURE. THEY ALTER THE INTERACTION OF IGFS WITH THEIR CELL SURFACE RECEPTORS.

SUBCELLULAR LOCATION: Secreted.

SIMILARITY: CONTAINS IGF-II MORE THAN IGF-I.

SIMILARITY: CONTAINS I THYROGLOBULIN TYPE-I DOMAIN.

SIMILARITY: BELONGS TO THE INSULIN-LIKE GROWTH FACTOR BINDING
                                                                MEDIINE=90368661; PubMed=1697583; ZapUENCE FROM N.A., AND SEQUENCE OF 40-77.

"Interaction of the protein nucleobindin with G alpha i2, as revealed by the yeast two-hybrid system.";
FEBS Lett. 373:155-158(1995).
-!- FUNCTION: Major calcium-binding protein of the Golgi. May have a role in calcium homeostasis (By similarity).
-!- SUBCHILLI Interacts with GNAIZ.
-!- SUBCHILLIAR LOCATION: In the cis-Golgi, tightly associated with the luminal side of the membrane. A small fraction of the protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 may be cytoplasmic (By similarity).
-!- TISSUE SPECIFICITY: Expressed both in fetal and adult heart, lung,

-!- SUBCELLULAR LOCATION: Secreted.
-!- ISSUE SPECIFICITY: Expressed in a variety offissues, with strongest expression in placenta.
-!- SIMILARITY: BELONGS TO PEFTIDASE FAMILY S2C; ALSO KNOWN AS THE DEGP/DEGQ/DEGS FAMILY.
-!- SIMILARITY: CONTAINS 1 IGFBP DOMAIN.
-!- SIMILARITY: CONTAINS 1 RAZAL-LIKE DOMAIN.
-!- SIMILARITY: CONTAINS 1 PDZ/DHR DOMAIN.

Submitted (JUN-2001) to the EMBL/GenBank/DDBJ databases.
-!-FUNCTION: NEDRONAL CELL SURRACE PROTEIN THAT MAY BE INVOLVED IN
CELL RECGGNITION AND CELL ADHESION.
-!- SUBUNIT: THE CYTOPLASMIC C.TERMINAL REGION BINDS TO CASK. SPECIFIC
ISOFORMS BIND ALPHA-DYSTROGLYCAN (BY SIMILARITY).
-!- SUBCELLULAR LOCATION: Type I membrane protein (Potential).
-!- ALTERNATIVE PRODUCTS: MULTIPLE ISOFORMS (BY SIMILARITY). THE ALPHA
(AC 09P2AS2) AND BETA ISOFORMS DIFFER IN THEIR N-TERMINUS BY USE OF
ALTERNATIVE PROMOTERS IN THE NRXN2 GENE.
-!- DOMAIN: ALTERNATIVE SPLICING IN THE LAMININ G-LIKE DOMAIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

Pept. 83:1-10(1999).
-!- FUNCTION: Receptor for prolactin-releasing peptide (PrRP).
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Only detected in the pituitary gland.
-!- SIMILARITY: BELONGS TO PAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                  Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

**Molecular cloning of cDNAs for the rat interleukin 2 receptor alpha and beta chain genes: differentially regulated gene activity in response to mitogenic stimulation.";

**Eur. J. Immunol. 21:2133-2138(1991).*

-! FUNCTION: RECEPTOR FOR INTERLEUKIN-2. THIS BETA SUBUNIT IS INVOLVED IN RECEPTOR MEDIATED ENDOCYTOSIS AND TRANSDUCES THE MITOGENIC SIGNALS OF IL.2.

-: SUBUNIT: NON COVALENT DIMER OF AN ALPHA AND A BETA CHAINS. IL-2R EXIST IN 3 DIFFERENT FORMS. A HIGH AFFINITY DIMER, AN INTERMEDIATE AFFINITY MONOMER (BETA CHAIN), AND A LOW AFFINITY MONOMER (ALPHA CHAIN). THE HIGH AND INTERMEDIATE AFFINITY FORMS ALSO ASSOCIATE WITH A GAMMA CHAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

-I- FUNCTION: TRANSPORT OF PHOSPHORYLATED LYSOSOMAL ENZYMES FROM THE COLGI COMPLEX AND THE CELL SURFACE TO LYSOSOMAL ENZYMES BEARING PHOSPHOMANNOSYL RESIDUES BIND SPECIFICALLY TO MANNOSE-6-PHOSPHATE RECEPTORS IN THE GOLGI APPARATUS AND THE RECEPTORS IN THE GOLGI APPARATUS AND THE RELYSOSOMAL ENGYPLICAND COMPLEX IS TRANSPORTED TO AN ACIDIC PRELYOSOMAL COMPARTMENT WHERE THE LOW PH MEDIATES THE DISSOCIATION OF THE COMPLEX. THIS RECEPTOR ALSO BINDS INSULIN GROWTH FACTOR II.

-I- SUBCELUCIAR LOCATION: Type I membrane protein. Lysosomal.

-I- DOMAIN: CONTAINS 15 REPEATING UNITS OF APPROXIMATIVELY 147 AA. THE MOST HIGHLY CONSERVED REGION WITHIN THE REPERAT CONSISTS OF A STRETCH OF 13 AA THAT CONTAINS CYSTEINES AT BOTH ENDS.

C. Species: Bos primigenius taurus (cattle)
C. Species: 19-Dec-1997 #sequence_revision 19-Dec-1997 #text_change 20-Aug-1999
C. Accession: 145878
R. Liou, L. S.; Sastry, R.; Hartshorn, K. L.; Lee, Y. M.; Okarma, T. B.; Tauber, A. I.; Sa Gene 141, 277-281, 1994
A. Title: Bovine conglutinin (BC) mRNA expressed in liver: cloning and characterizati A; Reference number: 145878; MUID:94215917
A. Reference number: 145878
A. Status: preliminary; translated from GB/EMBL/DDBJ
A. Molecule type: mRNA
A. Molecule type: mRNA
A. References: GB:L18871; NID:9495012; PIDN:AAA20126.1; PID:9495013
C. Superfamily: pulmonary surfactant protein D; C-type lectin homology
F: 248-369/Domain: C-type lectin homology <LCH>

A; Title: Identification and developmental expression of the Xenopus laevi

A; Reference number: S23756; MUID:93244789

A; Accession: S23756

A; Status: preliminary

A; Molecule type: mRNA

A; Residues: 1-1485 < TUC>

A; Cross-references: EMBL:X65256; NID:964622; PIDN:CAA46348.1; PID:964623

C; Superfamily: cystic fibrosis transmembrane conductance requiator; ATP-

C; Keywords: ATP; nucleotide binding; P-loop; transmembrane protein
